

## **EU-LAC Health 1<sup>st</sup> Scenario-Building Workshop**

**Buenos Aires, Argentina, 22-23 October 2012**

### **Summary**

The first "Scenario Building Workshop" was held by the EU-LAC Health project consortium, on 22-23 October in Buenos Aires. Project partners, as well as Advisory Board members together with European and Latin American experts from the health research sector to analyzed different scenarios of possible common funding mechanisms for joint health research collaboration.

The Workshop was opened by Ms Águeda Menvielle, Director of the International Relations Department of Ministry of Science, Technology and Productive Innovation (MINCYT), Mr Alfonso Díez Torres, Ambassador of the EU in Argentina, and Ms Carolina O'Donell; Technical Coordinator of Ministry of Health (MSAL) emphasising the importance of international cooperation between LAC and EU for scientific development.

The first part of the workshop consisted of a review of potential health research areas for collaboration suggested by EU and LAC country representatives in response to a preparatory survey carried out by the consortium. These areas need to be identified and analyse to determine overlappings and common health research interests. The international cooperation in health research then brings an added value and mutual benefit to both regions.

In order to sort out possibilities for a common funding of bi-regional research cooperation initiatives, three different scenarios developed in deskwork prior to the meeting were presented during the second part of the workshop. These were examined through an in-depth SWOT-analysis by the partners, experts and project advisors. Many strengths and opportunities such as already existing well working funding mechanisms and bilateral agreements were exemplified. However, it was pointed out that weaknesses and threats such as the difficulty of harmonizing several countries' interests or the difficulty of collecting resources from participating countries have to be kept in mind. This SWOT-analysis has been seen as a success by the participants allowing the partners to better anticipate the risks and opportunities when it actually comes to realistically plan, organize and establish common funding schemes of health research.

The second “Scenario Building Workshop” will be held in Italy, (Rome) in April 2013. It is planned as a continuation of the Buenos Aires Scenario-Workshop. The results will here be narrowed and worked with aiming at a consensus in common funding acceptable for all countries in the regions and developing a first draft of the common roadmap.
